SUSTAINABLE ENVIRONMENT POLICY

Using the accumulated experience, knowledge and good practices, Industrial Pack Ltd. strives to ensure a stable economic growth of the company. The most important thing for the company is the ability to manage its economic, commercial and innovation-investment activities in such a way as to ensure constant quality of its products and services and to limit the impact on the environment.

Our goal is to achieve environmental excellence in the company's daily operations by applying the best "green" practices, which will lead to the achievement of a sustainable growth and increase the competitiveness of the company.

Our environmental protection policy is focused on:

PROTECTION OF WATER RESOURCES

We commit to implementing integrated water resources management (IWRM) practices that promote the coordinated development and management of water, land, and related resources to maximize economic and social welfare without compromising the sustainability of vital ecosystems.

We pledge to reduce pollution from industrial, agricultural, and urban sources by enforcing stringent water quality standards and promoting best practices in waste management, including wastewater treatment and the reduction of plastic and chemical pollutants.

ENERGY EFFICIENCY AND ENERGY SAVING

We strive to save energy by offering products with innovative technology / low microns - high resistance / that need minimal heating to achieve maximum shrink effect.

RECYCLING

We collect separately the waste that accumulates from residuals packaging our customers and participate in a program for glass and plastic recycling.

SUPPLIERS AND PRODUCTS

We are working primarily with suppliers that implement green practices, such as the implementation of energy-efficient lines, introduction of an automated systems for monitoring and control of energy consumption, etc.

All the company's products are recyclable.

LONG TERM GOALS:

- Maximum satisfaction of customer requirements and expectations;
- Compliance with applicable legal and other regulatory requirements regarding quality management of distributed products, the environment and energy;
- Commitment to meet the defined environmental protection goals to extend the life cycle of distributed products and efficient use of energy by implementing pollution reduction programs and applying good manufacturing practices;
- Increasing the competence and responsibility of the personnel for the implementation of the goals and policies on quality, environment and energy through training, discussion and improvement of internal communication, by means of effective feedback links;
- Continuous improvement of management through monitoring, analysis and management of the activities and processes affecting the quality of the delivered product and environmental aspects;
- Minimizing the generated waste and securing it;
- Creation of opportunities for product recycling;
- Maintaining a high level of technical security and optimizing the use of resources, including energy and water consumption;
- Restoration and improvement of environmental components;
- Informing users about the best practices for managing plastic waste and about the possibilities to reduce their negative impact on the environment;
- Prevention and adequate response in the event of extraordinary and emergency situations;
- Creating mutually beneficial relationships with partners and customers to improve the efficiency of joint environmental activities;
- Ensuring the necessary resources for the operation and continuous improvement of the quality, environmental and food management system in accordance with the standards

Industrial pack EOOD carries out a long-term corporate policy for sustainable development and will continue to seek and implement new practices for environmental protection, as well as participate in new environmental initiatives in the future as well.
